Physical : White to off-white powder Description

Solubility (5% in : Clear to very faintly turbid, 1M NaOH) : Clear to very faintly turbid, colourless to very faint yellow

solution

Residue on : ≤ 0.1%

Ignition

Heavy Metals : ≤ 20ppm

Assay : ≥ 99.0% (anhydrous basis)

Version : v1.1

About Uracil

Uracil is a pyrimidine nucleotide that replaces thymine in the process of transcribing DNA into RNA. Besides this fundamental function, Uracil is also known for its use in the anticancer drug 5-fluorouracil: when combined with fluorine, uracil can block RNA synthesis in cancerous cells. Within a lab setting, Uracil is also used as a void marker in reverse-phase HPLC columns.
