

Product Datasheet

GK0306 - Uracil

Product Details

Product Name	Uracil
Glentham Code	GK0306
CAS Number	66-22-8
EINECS	200-621-9
MDL Number	MFCD00006016
PubChem SID	310281579
Related Categories	Biochemicals, Nucleosides Nucleotides, Raw Materials (IVD)

Solubility (5% in 1M NaOH) : Clear to very faintly turbid, colourless to very faint yellow solution

Residue on Ignition : ≤ 0.1%

Heavy Metals : ≤ 20ppm

Assay : ≥ 99.0% (anhydrous basis)

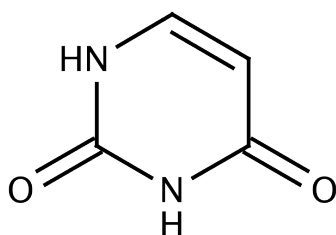

Version : v1.1

About Uracil

Uracil is a pyrimidine nucleotide that replaces thymine in the process of transcribing DNA into RNA. Besides this fundamental function, Uracil is also known for its use in the anticancer drug 5-fluorouracil: when combined with fluorine, uracil can block RNA synthesis in cancerous cells. Within a lab setting, Uracil is also used as a void marker in reverse-phase HPLC columns.

Structure

Molecular Weight : 112.09
Molecular Formula : C₄H₄N₂O₂

Storage

Recommended storage temperature: +20°C.

Hazards and Transport

Not classified as hazardous under CLP.
Not classified as dangerous for transport.

Glentham Product Specification

Physical Description : White to off-white powder
